DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention: species 1, directed to a trigger mechanism including pawls; species 2, directed to a trigger mechanism including a frictional clutch; species 3, directed to at trigger mechanism including an optical relay switch; and species 4, directed to a trigger mechanism including an electrical relay switch.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, Claims 1 and 11 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Application/Control Number: 10/698,775 Page 3

Art Unit: 3736

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. During a telephone conversation with Mayumi Maeda on 01/12/06 a provisional election was made without traverse to prosecute the invention of a lance with a trigger mechanism comprising of pawls, Claims 1-6,10-13. Affirmation of this election must be made by applicant in replying to this Office action. Claims 7-9 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on 10/31/03 is acknowledged. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Specification

4. The disclosure is objected to because of the following informalities:

Portion 210, referred to in paragraph [0024] of the specification, is not shown in Figure 2 of the drawings.

The US Patent Application, referred to in paragraph [0032] of the specification, is not disclosed.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 3736

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

- 6. Claims 1, 2, 5, 10-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Sakata et al (US Pub No. 2004/0215224). In regards to Claim 1, Sakata et al disclose a lancing device comprising 1) a housing (2) formed with a "cylindrical member" (20) (¶0063); 2) a lancing mechanism (3) operatively attached to the housing (¶0067); 3) a pressure tip, referred to as a "cylindrical member" (8) including an "analysis sensor" (4), moveably attached to the housing for engaging a target site and creating a target site bulge (¶0080, 0081); 4) a trigger mechanism comprising of a "sensor holder" (7B) and "pivot member" (79) for detecting a target site bulge of a predetermined height and triggering an immobilization of the pressure tip with respect to the housing. Because the pressure tip is defined with the "analysis sensor" (4) and said sensor becomes immobilized at a predetermined angle, which depends upon the degree of skin bulging, the pressure tip is considered to immobilize as a whole (¶0110, 0111). Please see Figure 19 for a detailed drawing.
- 7. In regards to Claim 2, Sakata et al disclose a bias spring (83) for applying a pre-load force against the cylindrical member (8) of the pressure tip (Figure 19), as defined above. In regards to Claim 5, Sakata et al disclose a trigger mechanism including at least one locking pawl (7B) and at least one pawl trigger arm (79) wherein the "pivot member" (79) and "sensor holder" (7B), which includes "stopper" (77a), perform a motion-deterring function and thus are considered as pawls (¶0110). In regards to Claim 10, Sakata et al disclose the trigger mechanism configured to initiate lancing by the lancing mechanism once the pressure tip has been immobilized, as described previously (¶0082, 0084).

Application/Control Number: 10/698,775

Art Unit: 3736

8. In regards to Claim 11, Sakata et al disclose a method for lancing a target site comprising 1) providing a lancing device that includes a housing (2), a lancing mechanism (3), a pressure tip (4, 8 as defined above), and a trigger mechanism (7B, 79) as explained for Claim 1; 2) contacting the pressure tip with the target site (¶0080); 3) urging the pressure tip towards the target site, thereby creating target site bulge (¶0081) that is detected by the trigger mechanism (7B, 79) and triggering an immobilization of the pressure tip with respect to the housing, as described above (¶0110, 0111); 4) lancing the target site bulge with the lancet mechanism (90082, 0084).

Page 5

9. In regards to Claim 12, Sakata et al disclose the target site as a dermal tissue target site, skin S (90080). In regards to Claim 13, Sakata et al disclose providing a lancing device that includes a bias spring (83) for applying a pre-load force against the cylindrical member (8) of the pressure tip, as explained previously (Figure 19).

Claim Rejections - 35 USC § 103

- 10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 3,4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sakata et al in 11. view of Schmelzeisen-Redeker et al (US Pat No. 6589260). Sakata et al disclose a spring (83) to apply a pre-load force against the pressure tip but do not specify the specific strength of the spring. Schmelzeisen-Redeker et al disclose a lancing device with a spring that supplies a force of 10-15 N to optimally control the pressing force needed to operate the lancet (Col.7 line 58-65,

Art Unit: 3736

Col.8 line 26-30). Therefore, it would have obvious to one of ordinary skill in the art at the time the invention was made to modify the spring disclosed by Sakata et al to provide a force within the ranges of 3-13 N and 9-10 N, as taught by Schmelzeisen-Redeker et al, to provide a sufficient amount of force to operate the lancing device, including that necessary to create a desired target site bulge.

12. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sakata et al in view of Shraga (US Pub No. 2005/0038465). Sakata et al disclose a locking pawl (7B) with stopper (77a) but do not disclose the pawl having multiple ratchet teeth. Sakata et al also do not disclose the pressure tip having ratchet teeth, wherein the pressure tip is defined to include "analysis sensor" (4), which is attached to "pivot member" (79), therefore constituting pivot member as a part of the pressure tip. Shraga discloses a lancet device that uses ratchet teeth to engage pawls as an effective method to maintain the depth setting, shown in Figures 47-50 (¶0124 and 0125). Therefore, it would have obvious to one of ordinary skill in the art at the time the invention was made to modify the locking pawl (7B) and the pivot member (79) of the pressure tip, as disclosed by Sakata et al, to both include multiple ratchet teeth as further taught by Shraga, to enhance the immobilization mechanism disclosed by providing a more fitted engagement of the stopper (77a) of the locking pawl (7B) against the pivot member (79) of the pressure tip during immobilization to create a superior trigger mechanism.

Application/Control Number: 10/698,775 Page 7

Art Unit: 3736

Conclusion

13. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure. Bajaj et al (US Pat No. 6056765) and Perez et al (US Pub No. 20020188223) both

disclose lancet devices.

14. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Helen Nguyen whose telephone number is 571-272-8340. The

examiner can normally be reached on Monday - Friday, 8 am - 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Max Hindenburg can be reached on 571-272-4726. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
